

Industry Change and Employment

The city is a place for work. In a large and dynamic city like New York, work takes place in various forms and changes in different ways. The manufacturing sector has been declining steadily since 1980 and there was a net reduction of 124 000 jobs from 1998 to 2017. This was the biggest reduction in jobs across all sectors.

The financial industry of New York City is world renowned and many of whom employed in the industry lives in New York County, minutes away from the financial district in Lower Manhattan. However, the total population employed in the sector has decreased over time. Instead, the turn of the century has brought about the growth of jobs in the health care and educational services, with over 300 000 more people employed in the sector compared to 1998. The jobs are also distributed fairly evenly across the city.

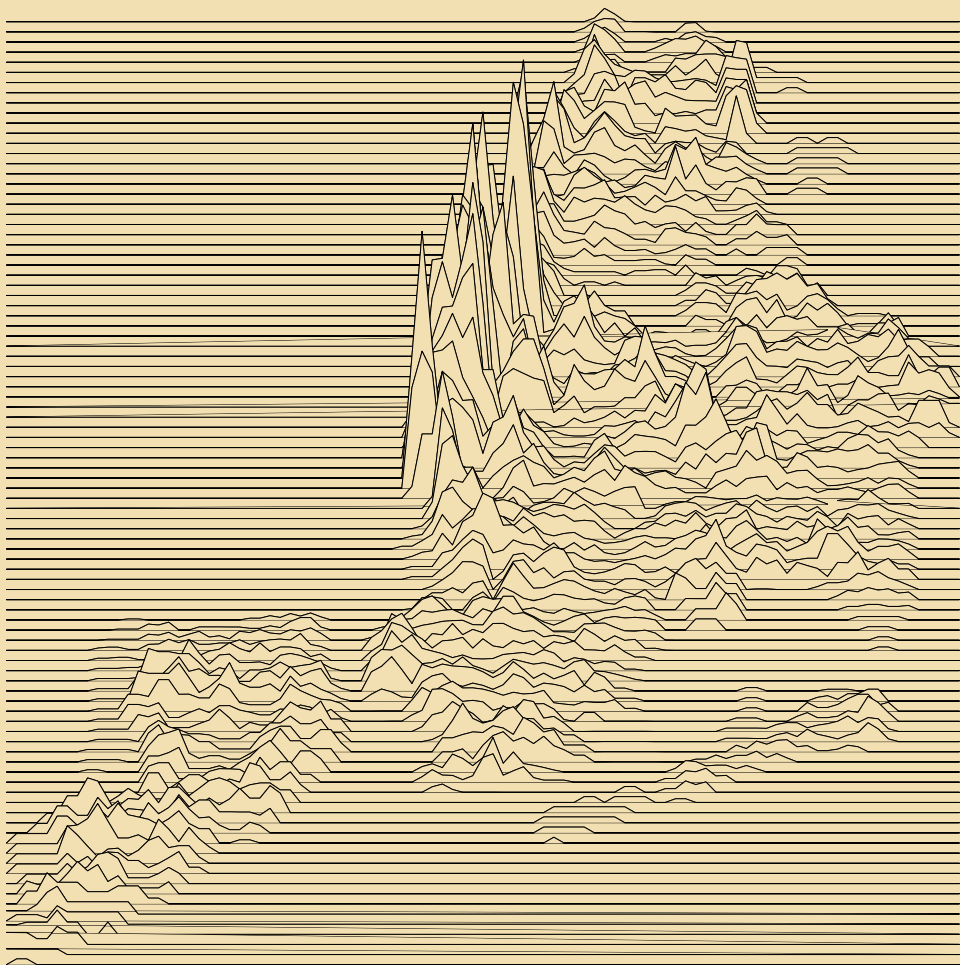

A. Change in Employee Population by Industry (1998-2017)

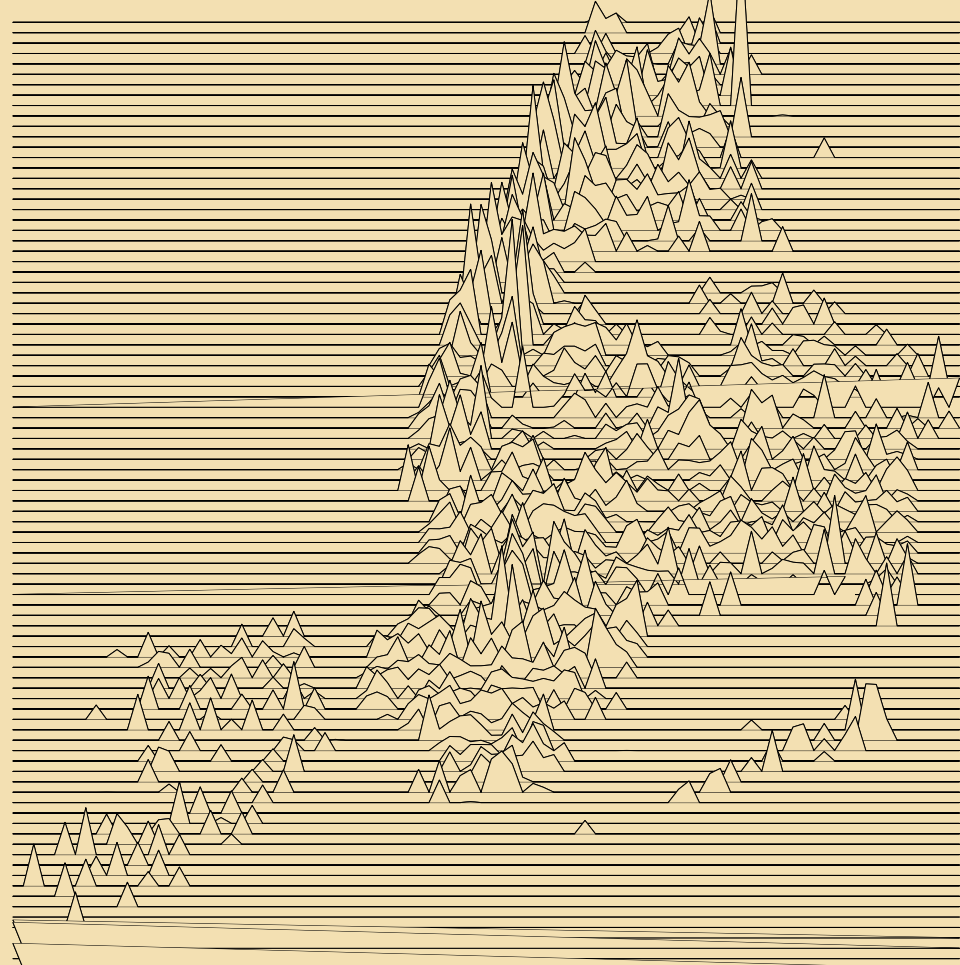

Data: County Business Patterns (1998 and 2017)

B. Population lines by Selected Industries (2018)

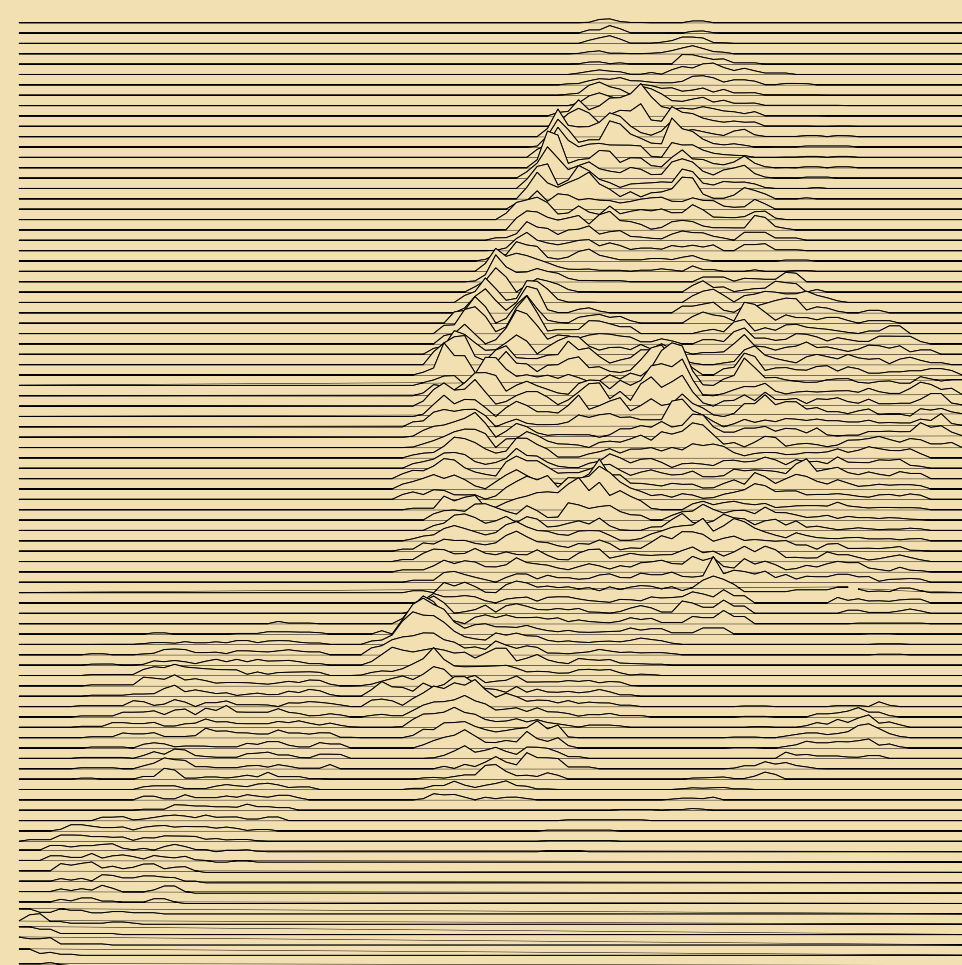

Finance, Insurance and Real Estate

Heathcare and Educational Services
